

A 'DAY IN THE LIFE OF...'

Name: **Kate Burrows**
 Company: **Adelphi Values**
 Current job title: **Senior Research Associate**
 University attended: **University of Manchester**
 Degree course: **Cognitive Neuroscience with Psychology**

Adelphi in three words:
Engaging Passionate Nurturing

“... my role offers me the variation I was seeking in my career, working across multiple therapy areas and learning new research skills to apply to our projects.”

While studying Neuroscience and Psychology at undergraduate level, I began to develop a keen interest in the field of science and healthcare. I was able to combine these areas of interest as I completed my MSc in Health Psychology, and subsequent further training in order to work as a Nutritionist. While I found this role hugely rewarding, I still felt that I wanted greater variety to my working day, and so was delighted to be offered a position as a research associate with Adelphi Values. I am pleased to say my role offers me the variation I was seeking in my career, working across multiple therapy areas and learning new research skills to apply to our projects.

The Patient-Centred Outcomes team essentially work to develop, modify and validate patient-reported outcome measures to provide evidence of treatment benefit in clinical trials or clinical settings and therefore support the drug approval process. Within the team there is an overwhelming sense of team work, enthusiasm and fun which makes working at Adelphi Values particularly enjoyable. A typical day can involve conducting literature reviews, analysing patient interview transcripts, writing reports and manuscripts. I would most definitely recommend working at Adelphi Values.
